                                                                                                                                                                                                                                                                             The present sequence represents a fusion protein comprising a Klebsiella pneumoniae outer membrane protein A (OmpA) designated P40 and a respiratory syncytial virus (RSV) antigon. Enterobaccerium OmpA proteins, associated with an immunogenic peptide from RSV are used to prepare a nasal composition that induces a protective response, against RSV infection in the upper and lower (lung) respiratory tract. OmpA potentiates the immune response to some immunogenic peptides, eliminating the need for adjuvants. The method is useful for producing vaccines for prevention or treatment of RSV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            370

                                         The present sequence represents a fusion protein comprising a peptide derived from the G protein of Respiratory syncytial virus (RSV) linked to a peptide derived from a diphtheria anatoxin. The diphtheria anatoxin peptide generates an immune response against any antigen coupled to it, and and has a negative, immediate hypersensitivity response. Diphtheria anatoxin derived peptides, when modified to lack at least one cysteine residue, are useful as carrier peptides. Deletion of Cys residues in peptides reduces formation of unwanted disulfide bridges. The peptides are used as a carrier for vaccines, particularly those for prevention or treatment of viral, bacterial, parasitic or fungal infections, or cancers and to generate, or increase, an immune response against infectious agents or tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4 TVKTKNITITQTQPSKPTIKQRQNKPPNKPNNDFHFBVFNFVPCSICSNNPTCWALCKRI

to a peptide derived from a diphtheria anatoxin. The diphtheria anatoxin and and has a negative, immediate hypersensitivity response. Diphtheria anatoxin derived peptides, when modified to lack at least one cysteine residue, are useful as carrier peptides. Deletion of Cys residues in anatoxin peptides reduces formation of unwanted disulfide bridges. The peptides are used as a carrier for vaccines, particularly those for prevention or treatment of viral, bacterial, parasitic or fungal infections, or cancers and to generate, or increase, an immune response against infectious agents or tumour cells.

The BB fragment is able to bind to human serum albumin and thereby enhance immunogenicity of any antigen, hapten or immunogen that is covalently coupled to it. In this specific example, the BB fragment was found to induce T helper memory cells, leading to production of anti-G2A antibodies by stimulated

The specification describes a method which uses quaternary aliphatic ammonium salts together with an immunogen or antigen to treat syncytial virus infections. The combination of the salt with the antigen or immunogen improves immunogenicity and equilibrates the Th1/Th2 immuno response. The method is used for the treatment of respiratory syncytial virus infections. The present sequence represents a fusion protein, comprising an albumin binding domain of the G protein of Streptococcus sp. fused to a G protein fragment of respiratory syncytial virus (VRS, long version). The fusion protein is used as an antigen in the method of the invention.

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; no bw sp, the same strain used for the BDGP pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoxI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pland EST libraries. - Web: www.genoscope.cns.fr)
Determination of this BAC-enf sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCGR digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACRAC Resource Center can be location/Qualifiers

http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBFH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 432

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial Gross Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial sogenic strain of Drosophila DNA provided by the BDGP from the isogenic strain of Drosophila DNA provided by used for the BDGP's pl and BST libraries. A more detailed description of the library filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

Sequence 4304, Application US/09878574

Patent No. US20020110548A1

GENERAL INFORMATION:

APPLICANT: Byrum, Joseph R.

APPLICANT: Thompson, Michael D.

TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with

TITLE OF INVENTION: Plants

TITLE OF INVENTION: Plants

CURRENT APPLICATION NUMBER: US/09/878,574

CURRENT PELICATION NUMBER: 09/333,535

PRIOR FILING DATE: 1990-06-14

PRIOR APPLICATION NUMBER: 09/333,535

NUMBER OF SEQ ID NOS: 15775

SEQ ID NO 4304

LENGTH: 793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AATTACATCACAAAC-CACCACCATACTAGCTTCAACAACACCAGGAGTCAAGTCAAACC 178

Sequence 4312/Application US/09878574

Sequence 4312, Application US/09878574

Patent No. US2002011054831

GENERAL INFORMATION:
APPLICANT: Byrum, Joseph R.
APPLICANT: La Rosa, Thomas J.
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with
TITLE OF INVENTION: Plants
FILE REFERENCE: 38-21(15401)B
CURRENT APPLICATION NUMBER: US/09/878,574
CURRENT APPLICATION NUMBER: 09/333,535

PRIOR APPLICATION NUMBER: 09/333,535

NUMBER OF SEQ ID NOS: 15775

LENGTH: 577
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               131 AAACCACCACATACTAGCTTCAACAACACCAGGAGTCAAGTCAAACCTGCAACCCACAA 190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TELEPHONE: (416) 595-1155
TELEFAX: (416) 595-1163
INFORMATION FOR SEQ ID NO: 7:
SEQUENCE CHARACTERISTICS:
LENGTH: 920 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           linear
